

Challenge

Privacy Constraint

How to share useful knowledge without leaking privacy?

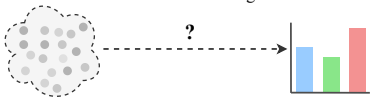

Cross-Domain Misalignment

How to align heterogeneous feature spaces without direct comparison?

Lack of Target Supervision

How to generate class-informative features for unlabeled target data?

FedPOT

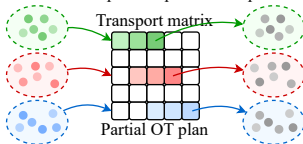

Private Prototype Release

DP-noised class prototypes are released instead of raw data.

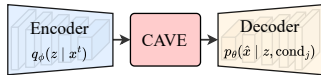

Relational Partial OT Alignment

Align target clusters with source classes via partial optimal transport.

Transport-Conditioned Generation

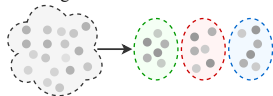

Generate complementary features conditioned on transport plan.

Solution

Aligned Representation

Target clusters are semantically aligned with source classes.

Improved Prediction

Better classifiers are learned on the target side.

Privacy Preserved

Raw data stay local; only sanitized prototypes are shared.
